

Coptis Tox: the new toxicology information database on substances available in Coptis Lab

March 5, 2017

Coptis Lab, the software specifically designed for cosmetic formulation laboratories, enables the personal care industry to efficiently manage formulation, testing and regulatory compliance.

Thanks to the new Coptis Tox database feature, Coptis Lab users will have access to toxicology information of more than 2 000 substances.

With Coptis Tox, Coptis Lab users will be able to:

- Edit the toxicological profile on each substance accessing data such as DAP, DAP comment, NOAEL, Origin NOAEL, NOAEL comment, etc... displayed in the Coptis Lab Substances datasheet for each formula
- Automatically calculate the Margin of Safety (MoS) for each ingredient of the formula to conduct the risk assessment characterization

For each information data, the source of the information is specified (Cosmetic Ingredient Review, International Journal of Toxicology, Scientific Committee on Cosmetology).

Coptis Tox is available by subscription and is updated twice a year.

COPTIS offers performance software solutions specifically designed for Cosmetic R&D laboratories:

- Coptis Lab: an integrated system for formulation development and regulatory affairs.
- Coptis Ingredients: the reference database of more than 15 000 cosmetic raw materials.
- Coptis Docs byMfiles: the Electronic Document Management System for the cosmetic R&D.
