

PR Note

Get rid of your preservation issues!

Cosphatec is launching something brand new at in-cosmetics Asia...

A stunning new alternative preservative combination with properties every formulator is desperately looking for: water-soluble, pH independent, odorless and a transparent liquid. **Cosphatec's** newest creation is free of traditional preservatives such as parabens, isothiazolinones and formaldehyde donors. The effective blend of multifunctional ingredients can easily create self-preserving formulations and concurrently has chelating and skin conditioning properties. With a broad spectrum of antimicrobial activity, it can efficiently inhibit bacteria, yeast and molds. Additionally, formulators can create sensitive facial applications where low irritation is required, e.g. in emulsions, face masks, shampoo and body wash.

- Liquid easy-to-use blend
- Water-soluble
- Colorless and odorless
- pH independent
- Great price-performance ratio

Interested? Make sure to check out our Innovation Zone Box at in-cosmetics Asia for more details!

Meet our international team at [booth P81](#) to learn more about our impressive portfolio of natural and synthetic alternative preservatives.
